

SECURITY

M15 - M40 - M60i Engine Immobilisers

Engine immobilisers are the main theft deterrent as they physically prevent the vehicle engine from being started or allowing it to run. Apart from the M15, these immobilisers can be upgraded to an alarm.

M15

This cost effective dual circuit immobiliser is so easy to use – it's automatic ! Turn the engine off and the dual circuit immobiliser automatically arms after 30 seconds.

To start the engine, just touch the transponder tag against the dash mounted receiver.

Simple yet so very secure !

M40

This remote controlled automatic dual circuit engine immobiliser is designed to deter theft by preventing the starting and running of your vehicles engine.

With the M40 you are always assured your vehicle is protected even if you forget to arm the security system with the supplied waterproof remote controls (2 supplied) which also allows for remote controlled keyless entry depending on the equipment level of your vehicle*.

M60i

Based on the alarm versions of the M60 range, the dual circuit M60i automatically immobilises your engine 30 seconds after turning the ignition off - so you know your vehicle is always secure.

Also included is a built-in 1 to 5 minute turbo timer that allows the system to be armed with the engine running with no sacrifice in security. If your vehicle is broken into whilst the engine is running, the engine will stop and be immobilised immediately. Easily upgraded to an alarm system.
